Art Unit: 2627

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-3, drawn to a image reading apparatus having a control section for controlling an encoding process in parallel to the control by a first control section that controls original feeding.
- II. Claims 4-8, drawn to an image reading apparatus for color conversion and sub-sampling processing and image data encoding.
- III. Claim 9, drawn to an image forming apparatus having color conversion converting to colorant signals and specific encoding for the colorant signals.

The inventions are independent or distinct, each from the other because:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombinations II and III have separate utility such as in an apparatus which does not require that the control of the encoding be in parallel with the first control that controls the original feeding, subcombinations I and II have separate utility such as in an apparatus which does not require sub-sampling processing of image data, and subcombinations I and III have

Art Unit: 2627

separate utility such as in an apparatus which does not require image forming in which signals are converted to colorant signals and encoding the colorant signals. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
